ENERGYRA® PV MODULES

At Energyra we don't produce: we create solar panels. Based on innovative back contact technology. The best-known, premium technology of the moment. Instead of traditional techniques in which the solar cells need to be soldered. The technology and materials we use - developed by ECN-Petten (now: TNO) - ensures for high-efficiency modules without using a lead containing cell-interconnect or a back-sheet with fluorine compounds. PFAS-free and slavery-free. And that's all much better for our environment. And people.

ENERGYRA® ECLECTIQ MWT MONO PERC BLACK

Small roof, high yield

When every square meter of roof surface counts - and when not? - the real yield (kWh/m²) is essential. The compact Energyra® ECLECTIQ solar panels have an unprecedented efficiency and power density. In addition to the additional benefits of the backcontact technology.

ENERGYRA® ICONIQ IBC MONO ZEBRA BLACK

The future is near ...

The solar cells in this module - which provide the unprecedented performance - are based on the 'ZEBRA' IBC (Interdigitated Back Contact) technology developed by ISC Konstanz. Today's most economical IBC technology, with a cell efficiency of more than 24% in production.

ENERGYRA® DYNAMIQ MWT MONO PERC BLACK

Ultra Light

From 1.8 kg/m², depending on the application. Industry specific adaptability. While retaining the proven and highest power yield per m².

ENERGYRA® DEFLECTIQ MWT MONO PERC BLACK

No glare, no flare

Non-reflective PV modules for delicate applications near (motor- or high-)ways, (military-) airports or vertical-urban use. Pretty cool actually.

**OUR CODE OF BUSINESS
CONDUCT AND ETHICS
GUIDES US IN ALL DECISIONS AND
ACTIONS WE TAKE, EVERY DAY.
WE GLADLY SHARE THEM WITH YOU.**
